1. Project Overview

Project Name: Digital Insurance Claim Management System (DICMS)

Industry: Insurance - General & Health Insurance

Client: Meridian Assurance Ltd.

Project Duration: 9 months

Methodology: Agile (Scrum)

Role: Senior Business Analyst

Responsibilities:

- Requirement Gathering and Analysis
- BRD Preparation
- Stakeholder Management
- User Story Creation
- Process Flow Modelling
- UAT Planning and Coordination

2. Business Problem

The existing claims process at Meridian Assurance Ltd. was largely manual and involved multiple handoffs between branches and different departments. Claims were received through branch counters or email and were then tracked using shared spreadsheets and physical documents. As a result, processing a claim often took 16–18 days, with limited visibility into the status of claims for customers.

The decentralized approach also created challenges for the business. Regional teams maintained their own tracking methods, making it difficult for management to get a

consistent view of claim volumes, ageing, and potential fraud exposure across locations. There was also no systematic mechanism to identify suspicious claims before settlement.

From the customer perspective, delays and the lack of regular status updates were contributing to an increase in complaints. At the same time, compliance reviews identified recurring gaps in documentation and audit trails, creating additional operational and compliance concerns.

The business therefore needed a more centralized and structured claims process that could reduce manual effort and delays, improve claim visibility, strengthen fraud and compliance controls, and provide management with reliable information for monitoring and decision-making.

3. Business Objectives

The primary objective of the Digital Insurance Claim Management System is to **reduce claim settlement turnaround time and improve operational control** by moving away from manual, branch-level claim handling to a centralized digital process.

The solution is intended to:

- Enable faster and more consistent policy verification.
- Standardize claim intake and assessment across branches.
- Introduce rule-based fraud checks before claim approval.
- Give management a consolidated view of claim volumes, claim status, and ageing.
- Maintain a complete audit trail to support compliance and improve process transparency.
- Provide better information for timely and informed decision-making throughout the claims lifecycle.

Overall, the goal is to make the claims process faster, more consistent, transparent, and easier to manage across the organization

4. Scope

Defined project scope boundaries in collaboration with claims, IT, and compliance stakeholders, distinguishing core deliverables from future-phase enhancements such as ML-based fraud analytics.

In Scope

- End-to-end digital claim workflow: submission, document upload, verification, assessment, approval, settlement, and closure
- Real-time integration with the existing policy administration system for policy and coverage verification
- Configurable multi-level approval workflow based on claim type, value, and risk score
- Rule-based fraud detection engine for flagging claims prior to payout
- Customer-facing claim submission portal and status tracking (web and app)
- Automated notifications via SMS, email, and app push at key claim milestones
- Centralized reporting and management dashboard across all branches
- Rollout to all 14 branch locations following pilot validation at 2 branches
- UAT, training, and change management support for branch and claims staff

Out of Scope

- Underwriting and policy issuance processes (handled by existing systems, integrated but not modified)
- Advanced AI/ML-based fraud analytics (rule-based checks only in this phase; flagged as a future enhancement)
- Reinsurance and third-party claim recovery workflows
- Migration of historical claims data prior to the last 12 months
- Mobile app development for iOS/Android (existing customer app was extended, not rebuilt)
- Integration with external legal or litigation management systems

5. Assumptions & Constraints

Assumptions

1. **Policy data availability** — The Policy Administration System (PAS) is assumed to hold accurate, up-to-date policy records (sum insured, coverage period, exclusions) that DICMS can reliably fetch via integration.
2. **Customer digital access** — A majority of policyholders have internet access and a registered mobile number/email for OTP-based login and SMS/email notifications; the Call Centre Executive channel exists to serve the remainder.

3. **Surveyor mobile connectivity** — Surveyors have smartphones with reasonably stable connectivity in the field to upload reports and photos during or shortly after a site visit.
4. **Bank details on file** — Customers' bank account details for NEFT settlement are assumed to be captured and verified at the policy or claim intimation stage.
5. **Regulatory framework is stable** — IRDAI reporting and audit requirements referenced in this case study (e.g., action-level audit logging) are assumed to remain materially unchanged during the project timeline.
6. **Fraud rule thresholds are business-defined** — Initial fraud-flagging rules (duplicate claims, inflated amounts, blacklisted vendors) are assumed to be provided by the Fraud & Risk Management Unit, with DICMS responsible for enforcement, not rule design.
7. **Single currency, single geography** — All claims are assumed to be processed in INR, within Meridian Assurance's existing regional/branch structure, with no multi-country or multi-currency handling in this phase.
8. **User roles are pre-provisioned** — Claims Officers, Underwriters, Surveyors, and other internal roles are assumed to already exist as employees with assigned branches/zones; DICMS manages access, not employee onboarding itself.

Constraints

1. **Insurance Agent onboarding deferred** — Agent-initiated claim submission is out of scope for the current release and deferred to a future phase (see Section 5, Stakeholder Analysis).
2. **PAS and NEFT gateway are external dependencies** — DICMS functionality for policy validation and payment processing is constrained by the availability, response time, and data accuracy of these third-party/internal systems; downtime in either directly affects claim TAT.
3. **TAT targets are configurable, not guaranteed** — While TAT thresholds and escalation rules are configurable without code deployment, actual turnaround time still depends on external actors (surveyor availability, customer document response time) outside the system's direct control.
4. **Mobile platform parity** — Surveyor mobile access was verified on Android during UAT; iOS testing remained pending at the time of this case study, constraining full mobile parity claims.
5. **Chat support dependent on vendor selection** — The customer chat/support feature (US-24) is constrained by third-party chat vendor selection, which was not finalized at the point of UAT.

6. **Fraud rule engine maturity** — Fraud detection accuracy is constrained by the rule engine's initial configuration; rules were designed to be tightened post-go-live based on real claim data rather than optimized from day one.
7. **No legacy data migration scope defined** — This case study assumes DICMS launches with new claims only; migration of historical/in-flight claims from legacy manual processes is not addressed.
8. **Single sign-on / identity management out of scope** — Login and role-based access are assumed to use DICMS's own credential and RBAC system rather than integrating with an enterprise-wide SSO solution.

6. Risk

Risk ID	Risk Description	Category	Likelihood	Impact	Mitigation	Owner
RIS K-01	PAS integration downtime or latency delays policy validation, stalling claim intake	Technical/Integration	Medium	High	Fallback validation workflow tested separately; monitored via System Health dashboard (US-33)	System Administrator
RIS K-02	NEFT gateway failure or delay disrupts claim settlement disbursement	Technical/Integration	Medium	High	Sandbox testing prior to go-live; "Payment Failed" flag and retry workflow for failed transactions	Finance Team
RIS K-03	Fraud rule engine flags too many false positives (or misses true	Operational	High	Medium	Phased rule tightening post-go-live based on real claim data,	Fraud & Risk Management Unit

	positives) in early rollout, straining Fraud Investigation Team capacity				agreed with Fraud & Risk Management Unit	
RIS K-04	Chat support vendor not finalized before go-live, leaving US-24 (chat with support) non-functional at launch	Vendor/Dependency	Medium	Low	Feature flagged as "Not Started"; customer support and grievance channels remain available as fallback	Customer Service Team
RIS K-05	Surveyor mobile app not fully verified on iOS, risking inconsistent field experience for iOS-using surveyors	Technical	Medium	Medium	Android verified first; iOS testing scheduled before full rollout	IT Development Team
RIS K-06	TAT targets breached due to external delays (customer document response, surveyor availability) outside system control	Operational	High	Medium	TAT breach-risk sorting/color-coding (US-21) gives officers early visibility to intervene	Claims Manager

RIS K-07	Insurance Agent channel deferred to a future phase, leaving a stakeholder-facing gap at launch	Scope	Certain	Low	Formally documented as a deferred scope decision; agent-initiated claims planned for a later release	Head of Claims Operations
RIS K-08	Duplicate-claim detection rule ("similar nature" match) still under refinement, risking both missed duplicates and false flags	Business Rule	Medium	Medium	Rule under active review; manual officer judgment remains available alongside system flag	Claims Officer
RIS K-09	Regulatory (IRDAI) reporting requirements change during the project, requiring rework of audit trail or reporting logic	Regulatory/Compliance	Low	High	Audit logging designed generically (every action, user ID, timestamp) to absorb most reporting changes without redesign	Compliance & Legal
RIS K-10	No legacy/in-flight claim migration	Operational/Transition	Medium	Medium	Recommended a defined cutover plan or	IT Development Team / Head of

	path defined, risking service gaps for claims mid-process at cutover				parallel-run period before full legacy retirement (not yet scoped in this release)	Claims Operations
RIS K-11	Customers without digital access or comfort face barriers to self-service adoption, undermining TAT and cost-efficiency gains	Adoption/Customer	Medium	Medium	Call Centre Executive channel (US-04) retained as an assisted alternative	Call Centre Executive
RIS K-12	High-value/high-priority claims routed for mandatory underwriter review could bottleneck if underwriter capacity doesn't scale with claim volume	Operational/Scalability	Low	Medium	Threshold configurable without code change, allowing rebalancing of review load as volume grows	Underwriting Team

7. Stakeholder Analysis

This project involved two distinct stakeholder layers: organizational stakeholders, who shaped scope, priorities, governance, and sign-off during discovery and sprint activities; and system user roles, who interact directly with the platform and are represented through the user stories.

At the organizational level, Claims Operations, Fraud & Risk, Compliance, and Underwriting held significant influence over scope and process decisions. Their priorities required trade-off negotiation between operational efficiency, risk control, regulatory compliance, and appropriate claim assessment. IT/Technology shaped technical feasibility and integration requirements throughout the sprint cycle, while Finance and Regional Branch Managers were engaged in more focused, phase-specific activities.

At the system level, these organizational stakeholders translate into functional user roles. Claims Operations maps to the Claims Officer and Claims Manager roles; Fraud & Risk Management maps to the Fraud Investigation Team; Compliance & Legal maps to the Compliance Officer; Finance Department maps to the Finance Team; Underwriting maps to the Underwriter role; and Customer Service maps to the Call Centre Executive role.

Two system roles — Customer (Policyholder) and Surveyor/Loss Assessor — sit outside the internal organizational stakeholder structure because they represent external users who participate directly in the claim lifecycle.

The System Administrator is a technical/operational role aligned with the IT/Technology function and is responsible for system configuration, user access management, and integration monitoring.

The Insurance Agent role, while identified during the initial stakeholder analysis, was not onboarded to the digital platform in the current release. Agent-initiated claim submission and related functionality have therefore been deferred to a future phase.

This dual view — organizational stakeholders driving requirements, governance, and business decisions versus system roles interacting with the resulting workflows — ensures that both the business context of the project and its functional system design are clearly documented.

8. Requirement Gathering Approach

The requirements for the Digital Insurance Claim Management System were identified by understanding the existing claims process, discussing business needs with key stakeholders, and analysing the gaps and challenges in the current process.

The approach followed was:

1 Stakeholder Discussions

Discussions were conducted with key stakeholders including Claims Operations, Claims Managers, Underwriting, Compliance, Fraud & Risk, Finance, Customer Support, IT and other relevant users. The objective was to understand their responsibilities, pain points, business needs and expectations from the proposed system.

2 Process Walkthroughs

The existing claims process was reviewed from claim intimation through validation, assessment, approval, settlement and closure. This helped identify manual handoffs, delays, duplicate activities and areas where better system support was required.

3 Document Analysis

Existing business documents, claim forms, policy information, operational procedures and relevant reports were reviewed to understand the information required at different stages of the claims lifecycle.

4 Workshops and Requirement Discussions

Workshops and focused discussions were used to clarify requirements, identify business rules and discuss exceptions. Where stakeholders had different priorities, the requirements were discussed collectively to reach an agreed approach.

For example, Claims Operations focused on faster processing, while Compliance and Fraud/Risk required additional controls. These discussions helped define appropriate approval, validation and fraud-checking requirements.

5 Current-State and Gap Analysis

The current process was compared with the desired future state to identify gaps and improvement opportunities. The findings were then translated into business requirements, functional requirements and supporting business rules.

6 Requirement Validation

Requirements were reviewed with relevant stakeholders to confirm that they were clear, complete and aligned with business objectives. Ambiguous requirements were clarified through follow-up discussions and scenario-based analysis.

7 Documentation

The agreed requirements were documented using functional requirements, non-functional requirements, business rules, user stories and acceptance criteria. Process flows and wireframes were also used where visual representation helped clarify the expected solution.

8 Traceability and UAT

Requirements were linked through the Requirements Traceability Matrix (RTM) to user stories, acceptance criteria, test cases and UAT scenarios. This helped ensure that the agreed requirements were covered throughout the delivery and validation process.

9. Functional Requirements

ID	Requirement
Policy Verification	
FR-01	The system shall verify policy status (active/lapsed/expired) in real time by integrating with the policy administration system using the policy number.
FR-02	The system shall auto-populate policyholder details (name, coverage type, sum insured, policy tenure) upon successful policy verification.
FR-03	The system shall block claim submission and display a clear reason if the policy is inactive, lapsed, or the claim date falls outside the coverage period.
Claim Submission	
FR-04	The system shall allow upload of supporting documents (invoices, police reports, medical records, photos) in PDF, JPG, and PNG formats up to 10MB per file, during initial claim submission.
FR-05	The system shall generate a unique claim reference number upon successful submission.

FR-06	The system shall present a dynamic claim form based on claim type (health, motor, property) with relevant mandatory fields.
FR-07	The system shall allow customers to save a partially completed claim and resume submission later.
Document Upload	
FR-08	The system shall support document upload in PDF, JPG, and PNG formats up to 10MB per file at any stage of the claim lifecycle, including additional documents requested during assessment (see FR-10).
FR-09	The system shall validate uploaded documents against a checklist mapped to claim type and flag missing mandatory documents before final submission.
FR-10	The system shall allow customers to upload additional documents after initial submission if requested by an adjuster.
Fraud Detection	
FR-11	The system shall run configurable fraud-check rules on every submitted claim and generate a risk score.
FR-12	The system shall flag claims exceeding a defined risk threshold for manual review before proceeding to assessment.
FR-13	The system shall allow the Fraud & Risk team to update rule thresholds without requiring a code change.
FR-14	The system shall maintain a log of all fraud flags raised, along with the reviewer's decision and comments.
Claim Assessment	
FR-15	The system shall provide adjusters with a consolidated case view including policy details, submitted documents, and fraud flags.
FR-16	The system shall allow adjusters to record assessment notes, approve/reject recommendations, and estimated settlement amount.
FR-17	The system shall allow adjusters to request additional information or documents from the customer directly through the platform.
Approval Workflow	
FR-18	The system shall route claims for approval based on a configurable matrix defined by claim value, type, and risk score.
FR-19	The system shall support multi-level approvals, escalating automatically if a claim exceeds an approver's authorization limit.
FR-20	The system shall allow approvers to approve, reject, or return a claim for re-assessment with mandatory comments.
FR-21	The system shall auto-approve claims below a defined value and risk threshold without manual intervention.
Settlement	
FR-22	The system shall generate a settlement advice upon final approval, including approved amount and deductions.
FR-23	The system shall integrate with the payment system to process settlement disbursement and update claim status upon successful payment.

FR-24	The system shall generate a system-recorded reconciliation reference for every settled claim for Finance review.
Notifications	
FR-25	The system shall send automated notifications (SMS, email, app push) to customers at key milestones: submission received, documents pending, under review, approved/rejected, settled.
FR-26	The system shall notify assigned adjusters and approvers when a claim is routed to them for action.
FR-27	The system shall send an escalation alert if a claim remains pending beyond a defined SLA at any stage.
Reporting	
FR-28	The system shall provide a dashboard showing claim volumes, status, and aging by branch and claim type.
FR-29	The system shall generate a fraud summary report showing flagged claims, outcomes, and rejection reasons over a selected period.
FR-30	The system shall allow authorized users to export claim and settlement reports in Excel and PDF formats.
FR-31	The system shall maintain an audit trail capturing all status changes, approvals, and edits made to a claim record.
Claim Rejection	
FR-32	The system shall block a claim rejection action until a pre-defined rejection reason code is selected; free-text rejection alone shall not be permitted.
FR-33	The system shall automatically notify the customer upon claim rejection, including the rejection reason and the applicable grievance-filing process.

10. Non-Functional Requirements

ID	Requirement
Performance	
NFR-01	Page Load Time The system should load any claim dashboard or search results page within 3 seconds under normal load (up to 500 concurrent users), so that claim handlers aren't left waiting during peak processing hours.
NFR-02	Document Upload Speed Uploading a claim-related document (e.g., photos, FIR copy, repair estimate) up to 10 MB should complete within 5 seconds on a standard broadband connection.
NFR-03	Report Generation MIS and claim-status reports (daily/weekly) should generate within 10 seconds for datasets up to 50,000 claim records.
Scalability	

NFR-04	Concurrent Users The system must support at least 1,000 concurrent users (claim handlers, surveyors, customers) without noticeable degradation in response time.
NFR-05	Claim Volume Growth The system should be able to scale to handle a 30% year-on-year increase in claim volume without requiring a full architectural overhaul.
Availability & Reliability	
NFR-06	System Uptime DICMS should maintain 99.5% uptime during business hours (8 AM–10 PM IST), excluding scheduled maintenance windows.
NFR-07	Scheduled Maintenance Window Planned downtime for maintenance/updates should be limited to a pre-communicated window (e.g., Sunday 1 AM–4 AM) and not exceed 4 hours per month.
NFR-08	Failover Support In case of a primary server failure, the system should switch to a backup instance within 5 minutes to minimize disruption to active claim processing.
Security	
NFR-09	Data Encryption All sensitive data (policyholder details, bank account info, claim documents) must be encrypted in transit (TLS 1.2+) and at rest (AES-256).
NFR-10	Role-Based Access Control Access to claim data and actions must be restricted based on user roles — Claims Officer, Surveyor, Underwriter, Customer, and Admin — so no user can view or act beyond their defined scope.
NFR-11	Audit Trail Every action on a claim (status change, document upload, payment approval) must be logged with user ID, timestamp, and action type for audit and compliance purposes.
NFR-12	Session Timeout User sessions should auto-expire after 15 minutes of inactivity to prevent unauthorized access on shared devices.
NFR-13	Regulatory Compliance The system must comply with IRDAI data protection guidelines and applicable data privacy regulations for handling customer PII and financial data.
Usability	
NFR-14	Intuitive Navigation A first-time user (customer or claims officer) should be able to raise or track a claim without needing formal training, using clear labels and guided steps.
NFR-15	Mobile Responsiveness The customer-facing claim intimation and tracking portal must work seamlessly on mobile browsers, since a majority of claim intimations are expected via mobile.

NFR-16	Accessibility The system should follow basic WCAG 2.1 (Level AA) guidelines to ensure usability for users with visual or motor impairments.
NFR-17	Multi-language Support The customer portal should support English and at least one regional language (e.g., Hindi) to improve accessibility for a wider customer base.
Maintainability	
NFR-18	Modular Architecture The system should be built in a modular fashion (claims intake, survey, settlement, payment as separate modules) so that individual modules can be updated without affecting the entire system.
NFR-19	Configuration over Code Business rules like claim TAT thresholds, approval limits, and escalation matrices should be configurable by admins without requiring code changes or redeployment.
Interoperability	
NFR-20	Integration with Policy Administration System (PAS) DICMS must integrate with the existing PAS to fetch policy details, sum insured, and coverage terms in real time during claim validation.
NFR-21	Payment Gateway / NEFT Integration The system must integrate with the bank's NEFT payment gateway to process claim settlements directly, with status updates reflected within 24 hours.
NFR-22	Third-Party Surveyor Tool Integration The system should support API-based integration with external surveyor/loss assessor tools for submitting survey reports and photos directly into DICMS.
Data Integrity & Backup	
NFR-23	Data Backup Full system backup should be taken daily, with incremental backups every 4 hours, to prevent data loss in case of failure.
NFR-24	Data Retention Claim records, once settled or closed, must be retained for a minimum of 8 years as per regulatory record-keeping norms.
Recoverability	
NFR-25	Disaster Recovery In the event of a major system failure, DICMS should be recoverable within 4 hours (RTO) with no more than 1 hour of data loss (RPO).

11. Business Rule

1. Claim Intimation

BR-001 | Claim Intimation Window

Statement: A claim must be intimated within a defined number of days from the date of incident, as per the applicable policy terms.

Trigger: Customer or Call Centre Executive initiates a new claim.

Expected Behavior: System checks the incident date against the policy's permissible intimation window (Configurable — varies by product) and flags claims intimated beyond this window for claims officer review rather than auto-rejecting them.

Role: Customer, Call Centre Executive, Claims Officer

Module: Claim Intimation

Priority: High

Related User Story: US-01

BR-002 | Multi-Channel Intimation Consistency

Statement: A claim raised through any channel (customer portal or call centre) must be treated with equal validity and follow the same downstream validation process.

Trigger: Claim is created via portal or call centre.

Expected Behavior: Claim record captures the source channel for traceability but does not alter subsequent validation, survey, or approval logic based on channel.

Role: Customer, Call Centre Executive

Module: Claim Intimation

Priority: Medium

Related User Story: US-01, US-04

2. Policy Eligibility & Coverage Validation

BR-003 | Active Policy Requirement

Statement: A claim can only be processed against a policy that is active (premium paid, not lapsed) as of the date of incident.

Trigger: Claim is submitted for validation.

Expected Behavior: System validates policy status via PAS at the time of incident, not at the time of claim submission. Claims against lapsed policies are flagged as "Not Eligible" and routed to claims officer for confirmation before rejection.

Role: Claims Officer

Module: Policy Eligibility & Coverage Validation

Priority: High

Related User Story: US-05, US-06

BR-004 | Coverage Scope Validation

Statement: The nature of the claimed loss must fall within the coverage scope of the specific policy (e.g., a fire-related claim is invalid under a policy that excludes fire peril).

Trigger: Claim type is captured during intimation or validation.

Expected Behavior: System checks claim type against the covered perils listed for that policy and flags mismatches for manual review. *(Assumption: exact coverage exclusions vary by product and are defined at the policy/product level, not standardized here.)*

Role: Claims Officer, Underwriter

Module: Policy Eligibility & Coverage Validation

Priority: High

Related User Story: US-06

3. Claim Submission & Mandatory Information

BR-005 | Mandatory Claim Fields

Statement: A claim cannot be submitted unless policy number, incident date, incident location, incident description, and claimant bank details are provided.

Trigger: Customer or Call Centre Executive attempts to submit a claim.

Expected Behavior: Submission is blocked until all mandatory fields are completed; missing fields are clearly indicated to the user.

Role: Customer, Call Centre Executive

Module: Claim Submission & Mandatory Information

Priority: High

Related User Story: US-01

BR-006 | Incident Date Cannot Be Future-Dated

Statement: The incident date entered on a claim must not be later than the date of claim submission.

Trigger: Customer enters incident date during claim creation.

Expected Behavior: System rejects submission if incident date is in the future and prompts correction.

Role: Customer, Call Centre Executive

Module: Claim Submission & Mandatory Information

Priority: Medium

Related User Story: US-01

4. Document Requirements

BR-007 | Mandatory Supporting Documents by Claim Type

Statement: Each claim type has a defined minimum set of mandatory documents (e.g., motor claims require a repair estimate; health claims require hospital bills) that must be submitted before the claim can move to validation.

Trigger: Claim reaches "Submitted" status.

Expected Behavior: System checks uploaded document types against the mandatory list for the selected claim type; claim cannot progress to validation until minimum documents are attached. *(Assumption: exact document checklist per claim type is to be confirmed by Business.)*

Role: Customer, Claims Officer

Module: Document Requirements

Priority: High

Related User Story: US-02

BR-008 | Document Authenticity Responsibility

Statement: The customer is responsible for the authenticity of documents submitted; submission of a falsified document is grounds for claim rejection and potential fraud investigation referral.

Trigger: A document is identified as suspicious or falsified during review.

Expected Behavior: Claims officer can flag the document and trigger a fraud referral without needing to reject the entire claim immediately.

Role: Claims Officer, Fraud Investigation Team

Module: Document Requirements

Priority: High

Related User Story: US-02, US-34

5. Duplicate Claim Detection

BR-009 | Duplicate Claim Identification

Statement: A new claim is considered a potential duplicate if it is raised against the same policy, same incident type, and within a configurable time window of an existing open or recently closed claim.

Trigger: New claim submitted for a policy with claim history.

Expected Behavior: System flags the new claim as a potential duplicate and requires the claims officer to confirm it is genuinely distinct before proceeding.

Role: Claims Officer

Module: Duplicate Claim Detection

Priority: Medium

Related User Story: US-07

BR-010 | Duplicate Override Accountability

Statement: If a claims officer proceeds with a flagged duplicate claim, the reason for override must be recorded before the claim can move forward.

Trigger: Claims officer dismisses a duplicate-claim warning.

Expected Behavior: System does not allow progression past the duplicate flag without a recorded justification, which becomes part of the claim's audit trail.

Role: Claims Officer

Module: Duplicate Claim Detection

Priority: Medium

Related User Story: US-07

6. Surveyor Assignment

BR-011 | Surveyor Eligibility for Assignment

Statement: Only surveyors who are active, not on leave, and whose registered service area covers the incident location are eligible for assignment to a claim.

Trigger: Claim reaches "Survey Required" status.

Expected Behavior: System presents only eligible surveyors as suggestions; ineligible surveyors do not appear in the assignment list.

Role: Claims Officer

Module: Surveyor Assignment

Priority: Medium

Related User Story: US-08

BR-012 | Conflict of Interest in Surveyor Assignment

Statement: A surveyor must not be assigned to a claim where they have a declared personal or financial relationship with the claimant.

Trigger: Surveyor assignment is initiated.

Expected Behavior: System relies on surveyor's self-declared conflict list to exclude such matches; claims officer is responsible for manual checks where self-declaration is insufficient. *(Assumption: conflict-of-interest declaration process is managed outside DICMS and referenced here as a business dependency.)*

Role: Claims Officer, Surveyor

Module: Surveyor Assignment

Priority: Medium

Related User Story: US-08

7. Claim Assessment

BR-013 | Mandatory Survey for Physical Damage Claims

Statement: Any claim involving physical damage above a configurable minimum claimed amount must undergo a physical survey before assessment; claims below this amount may qualify for a desk assessment. *(Threshold: Configurable.)*

Trigger: Claim type and claimed amount are captured.

Expected Behavior: System routes the claim to survey assignment or desk assessment based on the configured threshold.

Role: Claims Officer, Surveyor

Module: Claim Assessment

Priority: High

Related User Story: US-08, US-09

BR-014 | Survey Report Justification Requirement

Statement: A surveyor's recommended claim amount must be accompanied by a written justification referencing the extent of damage and applicable policy terms.

Trigger: Surveyor submits assessment recommendation.

Expected Behavior: Submission is blocked if justification notes are absent.

Role: Surveyor

Module: Claim Assessment

Priority: Medium

Related User Story: US-11

8. Claim Amount Calculation

BR-015 | Claim Amount Cannot Exceed Sum Insured

Statement: The final assessed claim amount cannot exceed the sum insured under the policy, regardless of the actual loss value.

Trigger: Claim amount is calculated at settlement stage.

Expected Behavior: System caps the payable amount at the sum insured and displays a variance note if the assessed loss exceeds this cap.

Role: Underwriter, Claims Officer

Module: Claim Amount Calculation

Priority: High

Related User Story: US-18

BR-016 | Partial Loss Proportional Calculation

Statement: For partial losses, the claim amount must be calculated in proportion to the extent of damage as assessed by the surveyor, not as a flat percentage of sum insured.

Trigger: Surveyor assessment indicates partial (not total) loss.

Expected Behavior: System uses the surveyor's assessed loss percentage/value as the basis for calculation rather than defaulting to a fixed ratio. *(Assumption: exact calculation formula is product-specific and to be confirmed by Business.)*

Role: Surveyor, Underwriter

Module: Claim Amount Calculation

Priority: Medium

Related User Story: US-11, US-18

9. Deductible & Depreciation

BR-017 | Mandatory Deductible Application

Statement: A policy-defined deductible amount must be subtracted from every approved claim before payout, unless the policy explicitly states a nil-deductible clause.

Trigger: Claim reaches settlement calculation stage.

Expected Behavior: System auto-applies the deductible from policy terms; manual override requires claims manager approval and a recorded reason.

Role: Claims Officer, Finance Team

Module: Deductible & Depreciation

Priority: High

Related User Story: US-18

BR-018 | Depreciation on Aged Assets

Statement: For claims involving physical assets (e.g., vehicles, equipment), depreciation must be applied based on asset age as per the policy's depreciation schedule before final payout is calculated.

Trigger: Claimed item has a defined age/usage at time of loss.

Expected Behavior: System calculates depreciation using the applicable schedule and reflects it as a separate line item in the settlement breakdown, visible to the customer.

(Assumption: depreciation schedule varies by asset category and product; specific rates to be confirmed by Business.)

Role: Claims Officer, Finance Team

Module: Deductible & Depreciation

Priority: High

Related User Story: US-18

10. Underwriting & Approval

BR-019 | Underwriter Sign-Off Required for Amount Revision

Statement: Any revision to the surveyor-recommended claim amount by the underwriter must be accompanied by a documented reason before the claim can proceed to approval.

Trigger: Underwriter changes the recommended amount.

Expected Behavior: System blocks progression until reason is captured; both original and revised figures are retained on the claim record.

Role: Underwriter

Module: Underwriting & Approval

Priority: High

Related User Story: US-14

BR-020 | Segregation of Duties in Approval

Statement: The claims officer who processes a claim must not be the same person who grants final underwriting approval for that claim.

Trigger: Claim reaches the approval stage.

Expected Behavior: System prevents the same user ID from performing both the claims-officer action and the underwriter approval action on a single claim.

Role: Claims Officer, Underwriter

Module: Underwriting & Approval

Priority: High

Related User Story: US-12

11. High-Value Claim Approval

BR-021 | High-Value Claim Escalation Threshold

Statement: Claims with an assessed amount exceeding a configurable high-value threshold must be routed for mandatory underwriter (or senior underwriter, per a tiered structure) approval and cannot be settled through standard claims-officer sign-off.

(Threshold: Configurable — to be confirmed by Business.)

Trigger: Assessed claim amount is calculated.

Expected Behavior: System auto-routes the claim based on the configured threshold; the routing rule itself must be adjustable without code changes.

Role: Underwriter, Claims Manager

Module: High-Value Claim Approval

Priority: High

Related User Story: US-13

BR-022 | Multi-Level Approval for Very High-Value Claims

Statement: Claims exceeding a second, higher configurable threshold may require sequential approval from more than one authority level (e.g., underwriter followed by claims manager). *(Threshold and number of approval levels: Configurable.)*

Trigger: Assessed claim amount exceeds the secondary threshold.

Expected Behavior: System enforces sequential sign-off and does not allow settlement initiation until all required approval levels are recorded.

Role: Underwriter, Claims Manager

Module: High-Value Claim Approval

Priority: Medium

Related User Story: US-13

12. Claim Rejection

BR-023 | Mandatory Rejection Reason

Statement: A claim cannot be marked as "Rejected" without a specific, pre-defined rejection reason code being selected (e.g., policy lapsed, peril excluded, fraud confirmed, insufficient documentation).

Trigger: Claims officer or underwriter initiates rejection.

Expected Behavior: System blocks the rejection action until a reason code is selected; free-text rejection alone is not permitted.

Role: Claims Officer, Underwriter

Module: Claim Rejection

Priority: High

Related User Story: US-29

BR-024 | Customer Notification on Rejection

Statement: A rejected claim must trigger a notification to the customer stating the rejection reason and the process for raising a grievance.

Trigger: Claim status changes to "Rejected."

Expected Behavior: System auto-generates and sends the notification within a configurable timeframe of the status change.

Role: System (triggered by Claims Officer action)

Module: Claim Rejection

Priority: Medium

Related User Story: US-20, US-25

13. Fraud & Risk Flagging

BR-025 | Automated Fraud Pattern Flagging

Statement: A claim must be automatically flagged for fraud review if it matches one or more pre-defined fraud indicators (e.g., repeated claims by the same claimant within a configurable period, claimed amount disproportionate to policy history, inconsistent documentation). *(Specific indicator thresholds: Configurable — to be confirmed by Fraud/Compliance team.)*

Trigger: Claim data matches a configured fraud rule during validation or assessment.

Expected Behavior: Claim is flagged "Suspicious" and held from progressing to approval until fraud review is completed or cleared.

Role: Fraud Investigation Team, Underwriter

Module: Fraud & Risk Flagging

Priority: High

Related User Story: US-34

BR-026 | Fraud Flag Does Not Equal Automatic Rejection

Statement: A fraud flag on a claim indicates the need for investigation, not an automatic rejection; the claim must go through the fraud investigation process before any final decision is made.

Trigger: Claim is flagged as suspicious.

Expected Behavior: System keeps the claim in a distinct "Under Fraud Review" status separate from "Rejected," preventing premature closure.

Role: Fraud Investigation Team

Module: Fraud & Risk Flagging

Priority: High

Related User Story: US-34, US-35

14. Fraud Investigation

BR-027 | Fraud Investigation Outcome Recording

Statement: Every fraud investigation must conclude with one of three defined outcomes — "Confirmed Fraud," "Cleared," or "Inconclusive" — and this outcome must be recorded against the claim before it can proceed further.

Trigger: Fraud Investigation Team completes review of a flagged claim.

Expected Behavior: System requires a mandatory outcome selection to close the fraud review step; the claim cannot move to settlement or rejection without this.

Role: Fraud Investigation Team

Module: Fraud Investigation

Priority: High

Related User Story: US-36

BR-028 | Confirmed Fraud Triggers Mandatory Rejection and Reporting

Statement: A claim with a "Confirmed Fraud" outcome must be automatically rejected and logged in a dedicated fraud register for regulatory and internal reporting purposes.

Trigger: Fraud investigation outcome is set to "Confirmed Fraud."

Expected Behavior: System auto-updates claim status to "Rejected – Fraud" and adds the record to the fraud log, distinct from standard rejections.

Role: Fraud Investigation Team, Compliance Officer

Module: Fraud Investigation

Priority: High

Related User Story: US-36

15. Claim TAT & Escalation

BR-029 | Claim TAT by Stage

Statement: Each stage of the claim lifecycle (validation, survey, underwriting, settlement) must have a defined Turnaround Time (TAT), and claims exceeding this TAT at any stage must be flagged for escalation. *(Specific TAT values per stage: Configurable — to be confirmed by Business.)*

Trigger: Claim remains in a given status beyond the configured TAT.

Expected Behavior: System flags the claim for the assigned officer and their manager once TAT is breached; flag visibility increases in urgency the longer the breach continues.

Role: Claims Officer, Claims Manager

Module: Claim TAT & Escalation

Priority: High

Related User Story: US-21

BR-030 | Automatic Escalation on Repeated TAT Breach

Statement: If a claim breaches TAT at more than one stage, or remains unresolved for a configurable extended period, it must be automatically escalated to the claims manager for direct intervention.

Trigger: Cumulative TAT breach conditions are met.

Expected Behavior: System reassigns visibility of the claim to the claims manager dashboard without removing it from the original officer's queue.

Role: Claims Manager

Module: Claim TAT & Escalation

Priority: Medium

Related User Story: US-21, US-27

16. Customer Queries

BR-031 | Query Pauses TAT Clock

Statement: When a claims officer raises a query to the customer for missing information or documents, the claim's TAT clock is paused until the customer responds.

Trigger: Query is raised and claim status changes to "Pending Customer Action."

Expected Behavior: System excludes the time spent in "Pending Customer Action" status from TAT calculations, resuming the clock only once the query is resolved.

Role: Claims Officer

Module: Customer Queries

Priority: Medium

Related User Story: US-22, US-23

BR-032 | Query Auto-Reminder on No Response

Statement: If a customer does not respond to a raised query within a configurable number of days, the system must send an automated reminder before the claim is considered for closure due to non-response. (*Reminder interval and non-response closure period: Configurable.*)

Trigger: Query remains unresolved past the configured reminder interval.

Expected Behavior: System sends reminder notification(s) and flags the claim for officer review if no response is received by the closure threshold.

Role: Claims Officer, Customer

Module: Customer Queries

Priority: Medium

Related User Story: US-22, US-23

17. Claim Status & Notifications

BR-033 | Defined Claim Status Lifecycle

Statement: A claim must move only through a pre-defined sequence of statuses (Submitted → Under Validation → Survey Assigned → Under Assessment → Under Underwriting → Approved/Rejected → Settlement in Progress → Paid → Closed), with grievance and fraud-review states as parallel branches; skipping stages without valid business justification is not permitted.

Trigger: Any claim status change is initiated.

Expected Behavior: System enforces valid status transitions only and blocks any transition that skips a mandatory stage without an authorized override and reason.

Role: Claims Officer, Underwriter, Claims Manager

Module: Claim Status & Notifications

Priority: High

Related User Story: US-19

BR-034 | Notification on Every Major Status Change

Statement: The customer must be notified via SMS and/or email at every major status change on their claim, without requiring the customer to actively check the portal.

Trigger: Claim status changes to any customer-relevant milestone (e.g., Survey Assigned, Approved, Paid, Rejected).

Expected Behavior: System auto-triggers notification within a configurable timeframe of the status change.

Role: Customer (recipient); triggered by system

Module: Claim Status & Notifications

Priority: Medium

Related User Story: US-20

18. Settlement & Payment

BR-035 | Payment Eligibility Pre-Check

Statement: A claim is only eligible for payment processing if it has reached "Approved" status, has passed fraud clearance (where applicable), and has valid, verified claimant bank account details on record.

Trigger: Finance team attempts to initiate payment.

Expected Behavior: System blocks payment initiation if any eligibility condition is unmet and specifies which condition is missing.

Role: Finance Team

Module: Settlement & Payment

Priority: High

Related User Story: US-15, US-16

BR-036 | Payment Failure Handling

Statement: If a payment transaction fails (e.g., invalid account, bank rejection), the claim must not be marked "Paid" or "Closed" and must instead move to a "Payment Failed" status requiring correction and re-initiation.

Trigger: NEFT transaction returns a failure response.

Expected Behavior: System reverts claim to "Payment Failed" status and notifies both finance team and claims officer for corrective action.

Role: Finance Team

Module: Settlement & Payment

Priority: High

Related User Story: US-16

19. Grievance Management

BR-037 | Grievance Eligibility Window

Statement: A customer may raise a grievance against a claim decision (rejection, amount dispute, delay) within a configurable number of days from the date of the decision or the TAT breach. *(Window: Configurable — to be confirmed by Business/Compliance.)*

Trigger: Customer selects "Raise Grievance" on an eligible claim.

Expected Behavior: System allows grievance submission only within the configured window; requests beyond this window are routed to claims manager for discretionary review rather than blocked outright.

Role: Customer, Claims Manager

Module: Grievance Management

Priority: Medium

Related User Story: US-25

BR-038 | Grievance Resolution Ownership

Statement: Every grievance must be assigned an owner (claims manager or designated escalation officer) and must not remain unassigned for longer than a configurable period.

Trigger: Grievance ticket is created.

Expected Behavior: System auto-assigns or flags unassigned grievances for claims manager attention within the configured period.

Role: Claims Manager

Module: Grievance Management

Priority: Medium

Related User Story: US-26

20. Audit & Compliance

BR-039 | Immutable Audit Trail for Key Decisions

Statement: All key claim decisions — approval, rejection, amount revision, fraud outcome, grievance resolution — must be logged with user ID, timestamp, and action taken, and this log must not be editable or delete able by any user, including administrators.

Trigger: A key decision action is performed on a claim.

Expected Behavior: System writes an immutable audit record for every such action, retrievable by compliance for reporting.

Role: Compliance Officer (auditor); applies to all decision-making roles

Module: Audit & Compliance

Priority: High

Related User Story: US-14, US-30

21. Role-Based Access

BR-040 | Role-Based Action Restriction

Statement: A user may only perform actions explicitly permitted for their assigned role (e.g., a claims officer cannot grant final underwriting approval; a call centre executive cannot approve claims); any attempt outside this scope must be blocked at the point of action, not merely hidden from view.

Trigger: User attempts any claim-related action.

Expected Behavior: System validates the user's role against the action's permission requirement before allowing execution, regardless of whether the UI element was visible.

Role: All roles (enforced universally)

Module: Role-Based Access

Priority: High

Related User Story: US-32

22. System Configuration

BR-041 | Business-Rule Configurability

Statement: All thresholds, TAT values, and escalation rules referenced across these business rules must be maintainable by an authorized System Administrator through configuration, without requiring a code deployment.

Trigger: Business or Compliance team requests a change to a threshold or rule value.

Expected Behavior: System Administrator updates the value via configuration settings; the change takes effect for claims processed from that point forward, and the change itself is logged for audit purposes.

Role: System Administrator

Module: System Configuration

Priority: High

Related User Story: US-31

12. User Stories

Module 1: Claim Intimation

US-01 | Customer

As a customer, I want to raise a new claim online, so that I don't have to visit a branch or call customer care to start the process.

US-02 | Customer

As a customer, I want to upload supporting documents (photos, FIR copy, bills) while raising a claim, so that my claim has all required evidence from the start.

US-03 | Customer

As a customer, I want to receive an instant claim reference number after submission, so that I can track my claim later.

US-04 | Call Centre Executive

As a call center executive, I want to raise a claim on behalf of a customer over phone, so that customers without internet access are not excluded.

Module 2: Claim Validation

US-05 | Claims Officer

As a claims officer, I want the system to auto-fetch policy details from PAS, so that I don't have to manually verify sum insured and coverage terms.

US-06 | Claims Officer

As a claims officer, I want the system to flag claims raised outside the policy coverage period, so that invalid claims are rejected early.

US-07 | Claims Officer

As a claims officer, I want to see a duplicate-claim alert if a similar claim exists for the same policy, so that fraudulent or repeated claims are caught early.

Module 3: Survey & Assessment**US-08 | Claims Officer**

As a claims officer, I want to assign a surveyor to a claim based on location and workload, so that surveys are distributed efficiently.

US-09 | Surveyor

As a surveyor, I want to view assigned claim details and customer contact info on my mobile, so that I can plan my site visit without going back to the office.

US-10 | Surveyor

As a surveyor, I want to upload my survey report and photos directly into the system, so that the claims officer gets it without manual handovers.

US-11 | Surveyor

As a surveyor, I want to recommend an assessed claim amount with justification notes, so that the underwriter has context for approval.

Module 4: Underwriting & Approval**US-12 | Underwriter**

As an underwriter, I want to review the surveyor's report and recommended claim amount, so that I can approve the claim, reject it with a reason, or revise the recommended claim amount based on policy terms.

US-13 | Underwriter

As an underwriter, I want claims above a certain threshold to be routed to me for mandatory review, so that high-value claims get proper scrutiny.

US-14 | Underwriter

As an underwriter, I want to record my reason if I revise the surveyor's recommended amount, so that there's a clear audit trail for that decision.

Module 5: Claim Settlement & Payment

US-15 | Claims Officer

As a claims officer, I want to initiate the settlement once a claim is approved, so that payment processing can begin without delay.

US-16 | Finance Team

As a finance team member, I want to process approved claim payments via NEFT, so that customers receive settlement directly into their bank account.

US-17 | Customer

As a customer, I want to receive a notification when my claim payment is successfully processed, so that I know the settlement amount has been transferred to my registered bank account.

US-18 | Claims Officer

As a claims officer, I want the system to auto-calculate deductions (deductible, depreciation) before final payout, so that manual calculation errors are avoided.

Module 6: Claim Tracking & Status

US-19 | Customer

As a customer, I want to track my claim status online in real time, so that I don't have to call customer care for updates.

US-20 | Customer

As a customer, I want to receive SMS/email alerts at every major status change, so that I stay informed without actively checking the portal.

US-21 | Claims Officer

As a claims officer, I want to view all claims assigned to me sorted by TAT breach risk, so that I can prioritize claims nearing deadline.

Module 7: Communication & Query Management

US-22 | Claims Officer

As a claims officer, I want to raise a query to the customer for missing documents, so that the claim doesn't stall without clear reason.

US-23 | Customer

As a customer, I want to respond to a raised query by uploading the requested document directly, so that I don't need to restart the process.

US-24 | Customer

As a customer, I want to chat with support regarding my claim status, so that I can get quick clarification without long wait times.

Module 8: Escalation & Grievance**US-25 | Customer**

As a customer, I want to raise a grievance if my claim is rejected or delayed beyond TAT, so that I have a formal channel for dispute.

US-26 | Claims Manager

As a claims manager, I want to view all escalated/grievance cases in one dashboard, so that I can intervene and resolve them quickly.

US-27 | Claims Manager

As a claims manager, I want to reassign a stuck claim to another officer, so that resolution isn't blocked by one person's unavailability.

Module 9: Reporting & MIS**US-28 | Claims Manager**

As a claims manager, I want to view daily/weekly claim volume and TAT reports, so that I can monitor team performance.

US-29 | Claims Manager

As a claims manager, I want to see a breakdown of claims by rejection reason, so that I can identify recurring issues in the process.

US-30 | Compliance Officer

As a compliance officer, I want to generate an audit report of all claim actions within a date range, so that I can respond to regulatory inquiries.

Module 10: Admin & Configuration

US-31 | System Admin

As a system admin, I want to configure claim TAT thresholds and escalation rules, so that business rules can be updated without a code change.

US-32 | System Admin

As a system admin, I want to create and manage user roles and permissions, so that access stays aligned with each employee's responsibilities.

US-33 | System Admin

As a system admin, I want to view system health and integration status (PAS, NEFT gateway), so that I can catch failures before they affect claim processing.

Module 11: Fraud & Risk Flagging**US-34 | Claims Officer**

As a claims officer, I want the system to flag claims matching known fraud patterns (e.g., repeated claimant, inflated amount), so that I can investigate before approval.

US-35 | Underwriter

As an underwriter, I want to view a risk score on flagged claims, so that I can make an informed approval decision.

US-36 | Compliance Officer

As a compliance officer, I want a separate log of all fraud-flagged claims and their resolution, so that patterns can be reviewed periodically.

Module 12: Fraud Investigation**US-37 | Fraud Investigation Team**

As a fraud investigator, I want to review fraud-flagged claims and supporting evidence, so that I can determine whether the claim requires further investigation.

US-38 | Fraud Investigation Team

As a fraud investigator, I want to record the investigation outcome and recommendations, so that the claim can proceed with a documented fraud decision.

Module 13: Claim Rejection

US-39 | Claims Officer

As a claims officer, I want to record the reason for claim rejection, so that the decision is transparent and available for audit and customer communication.

US-40 | Customer

As a customer, I want to receive the claim rejection reason and applicable next steps, so that I understand why my claim was rejected and can raise a grievance if required.

13. Acceptance Criteria

Module 1: Claim Intimation

US-01 | Raise a new claim online

AC-ID	Criteria	Expected Result
AC-01	Customer selects policy and initiates a new claim	System opens the claim intimation form pre-filled with policy number and customer name
AC-02	Customer submits claim with all mandatory fields filled	Claim is created and moves to "Submitted" status
AC-03	Customer tries to submit with mandatory fields missing	System blocks submission and highlights missing fields

US-02 | Upload supporting documents

AC-ID	Criteria	Expected Result
AC-01	Customer uploads a document under 10 MB in supported format (JPG, PNG, PDF)	Document uploads successfully and is attached to the claim
AC-02	Customer uploads a file exceeding 10 MB or unsupported format	System rejects the file and shows a clear error message
AC-03	Customer uploads multiple documents in one session	All documents are saved and listed under the claim's document section

US-03 | Receive instant claim reference number

AC-ID	Criteria	Expected Result
AC-01	Claim is submitted successfully	A unique claim reference number is generated and displayed immediately
AC-02	Claim reference number is generated	Same number is also sent to customer via SMS/email within 2 minutes

US-04 | Call center executive raises claim on behalf of customer

AC-ID	Criteria	Expected Result
AC-01	Executive searches customer by policy number	Customer and policy details are fetched and displayed
AC-02	Executive submits claim on customer's behalf	Claim is created and tagged with "Raised via Call Centre" source

Module 2: Claim Validation

US-05 | Auto-fetch policy details from PAS

AC-ID	Criteria	Expected Result
AC-01	Claim officer opens a submitted claim	Policy details, sum insured, and coverage terms are auto-populated from PAS
AC-02	PAS system is unreachable at the time of fetch	System displays an error and allows manual entry with a flag for later reconciliation

US-06 | Flag claims outside policy coverage period

AC-ID	Criteria	Expected Result
AC-01	Claim's incident date falls outside the policy validity period	System auto-flags the claim as "Out of Coverage" and notifies the claims officer
AC-02	Claim's incident date falls within the policy validity period	Claim proceeds to normal validation without flag

US-07 | Duplicate-claim alert

AC-ID	Criteria	Expected Result
AC-01	A new claim is raised for a policy with an existing open claim of similar nature	System displays a duplicate-claim warning with reference to the existing claim
AC-02	Claims officer chooses to proceed despite the warning	System logs the override with officer's remarks

Module 3: Survey & Assessment

US-08 | Assign surveyor based on location and workload

AC-ID	Criteria	Expected Result
AC-01	Claims officer selects "Assign Surveyor" on a validated claim	System suggests available surveyors filtered by claim location
AC-02	Claims officer manually overrides the suggested surveyor	System allows manual selection and logs the reason

US-09 | Surveyor views assigned claim details on mobile

AC-ID	Criteria	Expected Result
AC-01	Surveyor logs into mobile app/portal	Assigned claims list is displayed with claim summary and customer contact
AC-02	Surveyor taps on a specific claim	Full claim details, policy info, and uploaded documents are visible

US-10 | Upload survey report and photos

AC-ID	Criteria	Expected Result
AC-01	Surveyor uploads survey report and site photos	Files are attached to the claim and claim status updates to "Survey Completed"
AC-02	Surveyor attempts to submit without uploading mandatory report	System blocks submission until report is attached

US-11 | Recommend assessed claim amount

AC-ID	Criteria	Expected Result
AC-01	Surveyor enters recommended claim amount with justification notes	Recommendation is saved and routed to underwriter for review
AC-02	Surveyor leaves justification notes blank	System prompts that justification is mandatory before submission

Module 4: Underwriting & Approval

US-12 | View surveyor's report and recommended amount

AC-ID	Criteria	Expected Result
AC-01	Underwriter opens a claim pending approval	Surveyor's report, photos, and recommended amount are visible in one view

AC-02	Underwriter approves the claim as-is	Claim moves to "Approved" status with approved amount matching surveyor's recommendation
-------	--------------------------------------	--

US-13 | Route high-value claims for mandatory review

AC-ID	Criteria	Expected Result
AC-01	Claim amount exceeds the configured threshold	Claim is auto-routed to underwriter queue and cannot be approved by claims officer alone
AC-02	Claim amount is below the threshold	Claim follows standard approval flow without mandatory underwriter routing

US-14 | Record reason for revising recommended amount

AC-ID	Criteria	Expected Result
AC-01	Underwriter changes the claim amount from surveyor's recommendation	System mandates a reason/comment before saving the revised amount
AC-02	Revised amount and reason are saved	Both original and revised amounts are visible in the claim's audit trail

Module 5: Claim Settlement & Payment

US-15 | Initiate settlement after approval

AC-ID	Criteria	Expected Result
AC-01	Claim status changes to "Approved"	"Initiate Settlement" action becomes available to the claims officer
AC-02	Claims officer initiates settlement	Claim moves to "Settlement in Progress" and is routed to finance team

US-16 | Process payment via NEFT

AC-ID	Criteria	Expected Result
AC-01	Finance team submits payment request for an approved claim	System sends NEFT request to the bank gateway with claimant's account details
AC-02	NEFT transaction is successful	Claim status updates to "Paid" with transaction reference number logged

	NEFT transaction fails (e.g., invalid account)	System flags the claim as "Payment Failed" and notifies finance team for correction
--	--	---

US-17 | Notification after payment processed

AC-ID	Criteria	Expected Result
AC-01	Claim status changes to "Paid"	Customer receives SMS/email confirmation with amount and transaction reference

US-18 | Auto-calculate deductions before payout

AC-ID	Criteria	Expected Result
AC-01	Claim reaches settlement stage	System auto-calculates deductible and depreciation based on policy terms
AC-02	Deductions are calculated	Final payout amount reflects sum insured minus deductions, visible to claims officer before disbursal

Module 6: Claim Tracking & Status

US-19 | Track claim status in real time

AC-ID	Criteria	Expected Result
AC-01	Customer logs into portal and opens "My Claims"	Current status of each claim (Submitted, Under Review, Survey, Approved, Paid) is visible

US-20 | SMS/email alerts on status change

AC-ID	Criteria	Expected Result
AC-01	Claim status changes at any stage	Customer receives an SMS and email alert within 5 minutes of the change

US-21 | View claims sorted by TAT breach risk

AC-ID	Criteria	Expected Result
--------------	-----------------	------------------------

AC-01	Claims officer opens their claim queue	Claims are sorted with those nearing TAT deadline shown at the top, color-coded by urgency
-------	--	--

Module 7: Communication & Query Management

US-22 | Raise query for missing documents

AC-ID	Criteria	Expected Result
AC-01	Claims officer raises a query specifying missing document	Claim status changes to "Pending Customer Action" and customer is notified

US-23 | Respond to query by uploading document

AC-ID	Criteria	Expected Result
AC-01	Customer uploads requested document against an open query	Query is marked "Resolved" and claim resumes processing
AC-02	Customer uploads an incorrect or incomplete document	Claims officer can re-raise the query with updated remarks

US-24 | Chat with support regarding claim status

AC-ID	Criteria	Expected Result
AC-01	Customer initiates chat referencing a claim number	Support agent can view claim details in the chat panel and respond with status

Module 8: Escalation & Grievance

US-25 | Raise grievance for rejected/delayed claim

AC-ID	Criteria	Expected Result
AC-01	Customer selects "Raise Grievance" on a rejected or delayed claim	Grievance ticket is created and linked to the original claim

US-26 | View escalated/grievance cases in one dashboard

AC-ID	Criteria	Expected Result
-------	----------	-----------------

AC-01	Claims manager opens the grievance dashboard	All open grievances are listed with claim ID, customer, and days pending
-------	--	--

US-27 | Reassign stuck claim to another officer

AC-ID	Criteria	Expected Result
AC-01	Claims manager selects a claim and chooses "Reassign"	Claim is transferred to the newly selected officer with prior history intact

Module 9: Reporting & MIS

US-28 | View daily/weekly claim volume and TAT reports

AC-ID	Criteria	Expected Result
AC-01	Claims manager selects report date range and generates report	Report displays claim volume, average TAT, and breach count within 10 seconds

US-29 | Breakdown of claims by rejection reason

AC-ID	Criteria	Expected Result
AC-01	Claims manager selects "Rejection Analysis" report	Claims are grouped by rejection reason with count and percentage share

US-30 | Generate audit report of claim actions

AC-ID	Criteria	Expected Result
AC-01	Compliance officer selects a date range and generates audit report	Report lists every claim action with user ID, timestamp, and action type

Module 10: Admin & Configuration

US-31 | Configure TAT thresholds and escalation rules

AC-ID	Criteria	Expected Result
AC-01	Admin updates TAT threshold value for a claim type	New threshold applies to all claims from that point forward without requiring redeployment

US-32 | Create and manage user roles and permissions

AC-ID	Criteria	Expected Result
AC-01	Admin creates a new role with specific permissions	Role is available for assignment and restricts access as configured
AC-02	Admin modifies permissions of an existing role	Changes apply immediately to all users under that role

US-33 | View system health and integration status

AC-ID	Criteria	Expected Result
AC-01	Admin opens system health dashboard	Status of PAS and NEFT gateway integrations is shown as "Connected" or "Failed" with last sync time

Module 11: Fraud & Risk Flagging

US-34 | Flag claims matching fraud patterns

AC-ID	Criteria	Expected Result
AC-01	A claim matches a known fraud pattern rule (e.g., repeated claimant within X days)	Claim is auto-flagged as "Suspicious" and highlighted in claims officer's queue

US-35 | View risk score on flagged claims

AC-ID	Criteria	Expected Result
AC-01	Underwriter opens a flagged claim	A risk score (e.g., Low/Medium/High) is displayed with contributing factors listed

US-36 | Separate log of fraud-flagged claims

AC-ID	Criteria	Expected Result
AC-01	Compliance officer opens the fraud log	All flagged claims are listed with current resolution status (Under Investigation, Cleared, Confirmed Fraud)

Module 12: Fraud Investigation

US-37 | Review fraud-flagged claim and evidence

AC-ID	Criteria	Expected Result
AC-01	Investigator opens a claim flagged "Suspicious"	Full flag reason, risk score, and supporting evidence are visible in one view
AC-02	Investigator determines further investigation is needed	Claim status updates to "Under Fraud Review"; case remains open

US-38 | Record investigation outcome

AC-ID	Criteria	Expected Result
AC-01	Investigator submits outcome without selecting one of the three defined outcomes	System blocks submission until Confirmed Fraud / Cleared / Inconclusive is selected
AC-02	Investigator submits a valid outcome	Outcome is logged against the claim; claim unblocks to proceed per BR-027/BR-028

14. Process Flow

Key Pain Points Identified

- **Manual claim registration:** Customers often depend on branches, call centres, or agents to initiate claims.
- **Paper and email-based documentation:** Supporting documents are exchanged through physical copies, email, or multiple channels.
- **Manual policy verification:** Claims Officers manually verify policy coverage, validity, and eligibility.
- **Limited duplicate claim detection:** Potential duplicate or suspicious claims may not be identified early in the process.
- **Manual surveyor assignment:** Surveyor allocation depends on manual coordination and availability checks.
- **Delayed survey reporting:** Survey findings may be shared through email or physical documents, increasing processing time.

- **Multiple manual handoffs:** Claims move between Claims Officers, Surveyors, Underwriters, Finance, and other teams with limited workflow visibility.
- **Manual settlement calculations:** Deductibles and depreciation may require manual calculations, increasing the risk of errors.
- **Limited real-time claim tracking:** Customers may need to contact customer service for claim status updates.
- **Delayed communication:** Customers may not receive timely notifications about claim status changes or required documents.
- **Limited fraud and risk controls:** Fraud indicators may depend heavily on manual review and investigation.
- **High claim turnaround time:** Manual activities and multiple handoffs can contribute to delays in claim settlement.

Expected Improvements

- Digital claim intimation and document upload
- Automated policy validation
- Duplicate claim and fraud-risk flagging
- Structured surveyor assignment and digital assessment
- Role-based approval workflow
- Automated settlement calculations
- NEFT payment processing
- Real-time claim tracking
- Automated SMS/email notifications
- Digital query and grievance management
- Centralized reporting and audit trail
- Improved claim TAT and customer experience

15. UAT Scenarios

Module 1: Claim Intimation

Fields	Details
Scenario ID	UAT-01
Scenario Name	Raise New Claim Online
Preconditions	Customer has active policy and valid login
Steps	1. Login to portal 2. Navigate to "Raise New Claim" 3. Select policy, enter incident details 4. Submit
Expected Results	Claim created, status = "Submitted"
Actual Result	Claim created and status reflected correctly
Status	Pass

Scenario ID	UAT-02
Scenario Name	Upload Supporting Documents During Intimation
Preconditions	Customer on claim intimation form (draft state).com.
Steps	1. Click "Upload Document" 2. Select file under 10MB (JPG/PNG/PDF) 3. Confirm upload 4. Attempt file over 10MB
Expected Results	Valid file attaches; oversized/unsupported file rejected with error
Actual Result	Valid file uploaded; oversized file rejected correctly
Status	Pass

Scenario ID	UAT-03
Scenario Name	Instant Claim Reference Number Generation
Preconditions	Customer has submitted claim form
Steps	1. Submit claim 2. Observe confirmation screen 3. Check SMS/email
Expected Results	Reference number shown instantly; SMS/email within 2 minutes
Actual Result	Number displayed instantly; SMS received after 4 minutes
Status	Fail

Scenario ID	UAT-04
Scenario Name	Call Centre Executive Raises Claim on Behalf of Customer
Preconditions	Executive has tool access and customer's policy number
Steps	1. Search customer by policy number 2. Verify identity 3. Enter claim details 4. Submit
Expected Results	Claim created, tagged "Raised via Call Centre"
Actual Result	Not tested — integration pending
Status	Blocked

Module 2: Claim Validation

Fields	Details
Scenario ID	UAT-05.
Scenario Name	Auto-Fetch Policy Details from PAS
Preconditions	Claim submitted, pending validation
Steps	1. Officer opens claim 2. Observe policy details section
Expected Results	Policy number, sum insured, coverage terms auto-populate
Actual Result	Details fetched and displayed correctly
Status	Pass

Scenario ID	UAT-06
Scenario Name	Flag Claims Outside Policy Coverage Period
Preconditions	Claim exists with incident date outside policy validity
Steps	1. Officer opens claim 2. System validates incident date
Expected Results	Claim flagged "Out of Coverage"; officer notified

Actual Result	Flag displayed correctly with notification
Status	Pass

Scenario ID	UAT-07
Scenario Name	Duplicate Claim Alert
Preconditions	Open claim exists for same policy, similar incident
Steps	1. Raise new claim for same policy 2. Observe system response
Expected Results	Duplicate-claim warning shown, references existing claim
Actual Result	Warning shown; "similar nature" rule still being refined
Status	In Progress

Module 3: Survey & Assessment

Fields	Details
Scenario ID	UAT-08
Scenario Name	Assign Surveyor Based on Location and Workload
Preconditions	Claim validated, ready for survey assignment .
Steps	1. Officer selects "Assign Surveyor" 2. Review suggested list 3. Confirm or override
Expected Results	Surveyor suggested by location/workload; override logged if used
Actual Result	Suggestions and override logging worked as expected
Status	Pass

Scenario ID	UAT-09
Scenario Name	Surveyor Views Assigned Claims on Mobile
Preconditions	Surveyor has assigned claim, mobile access .
Steps	1. Login to mobile app 2. Open "Assigned Claims" 3. Tap a claim
Expected Results	Claim summary, contact, documents visible on mobile
Actual Result	Verified on Android; iOS pending
Status	In Progress

Scenario ID	UAT-10
Scenario Name	Upload Survey Report and Photos
Preconditions	Surveyor has completed site visit
Steps	1. Open assigned claim 2. Upload report and photos

	3. Submit
Expected Results	Status updates to "Survey Completed"; blocked if report missing
Actual Result	Status updated correctly; mandatory check enforced
Status	Pass

Scenario ID	UAT-11
Scenario Name	Recommend Assessed Claim Amount
Preconditions	Survey report uploaded
Steps	1. Enter recommended amount 2. Enter justification 3. Submit
Expected Results	Recommendation routed to underwriter; blocked if justification blank
Actual Result	As expected
Status	Pass

Module 4: Underwriting & Approval

Fields	Details
Scenario ID	UAT-12
Scenario Name	Underwriter Reviews Surveyor Report
Preconditions	Claim has surveyor recommendation pending review
Steps	1. Underwriter opens claim 2. Review report, photos, amount 3. Approve
Expected Results	Claim moves to "Approved" with matching amount
Actual Result	As Expected
Status	Pass

Scenario ID	UAT-13
Scenario Name	Mandatory Review for High-Value Claims
Preconditions	Claim amount exceeds configured threshold
Steps	1. Officer attempts direct approval 2. Observe system behavior
Expected Results	Claim auto-routed to underwriter; officer cannot approve alone
Actual Result	Routing worked correctly
Status	Pass

Scenario ID	UAT-14
Scenario Name	Record Reason for Revised Claim Amount

Preconditions	Underwriter reviewing claim with recommended amount
Steps	1. Change claim amount 2. Attempt save without reason 3. Enter reason, save
Expected Results	Save blocked without reason; both amounts visible in audit trail
Actual Result	As expected
Status	Pass

Module 5: Claim Settlement & Payment

Fields	Details
Scenario ID	UAT-15
Scenario Name	Initiate Settlement After Approval
Preconditions	Claim status = "Approved"
Steps	1. Officer opens approved claim 2. Click "Initiate Settlement"
Expected Results	Claim moves to "Settlement in Progress", routed to finance
Actual Result	As Expected
Status	Pass

Scenario ID	UAT-16
Scenario Name	Process NEFT Payment for Approved Claim
Preconditions	Claim status = "Settlement in Progress", claimant bank details on file
Steps	1. Finance submits payment request 2. NEFT request sent to gateway 3. Observe transaction
Expected Results	Success → status "Paid" with reference number; failure → "Payment Failed" flag raised
Actual Result	Sandbox testing partial; failure-case flag not verified
Status	In Progress

Scenario ID	UAT-17
Scenario Name	Notification After Payment Processed
Preconditions	Claim status just changed to "Paid"
Steps	1. Trigger payment completion 2. Check email/SMS
Expected Results	Confirmation received with amount and reference
Actual Result	As Expected
Status	Pass

Scenario ID	UAT-18
Scenario Name	Auto-Calculate Deductions Before Payout
Preconditions	Claim at settlement stage, deductible/depreciation terms defined
Steps	1. Open claim at settlement 2. Review calculated deductions 3. Verify final payout
Expected Results	Payout = sum insured minus deductions, visible before disbursal
Actual Result	Verified against 3 sample policy types
Status	Pass

Module 6: Claim Tracking & Status

Fields	Details
Scenario ID	UAT-19
Scenario Name	Track Claim Status in Real Time
Preconditions	Customer has active claim
Steps	1. Login to portal 2. Navigate to "My Claims"
Expected Results	Current status visible and accurate
Actual Result	As Expected
Status	Pass

Scenario ID	UAT-20
Scenario Name	SMS/Email Alerts on Status Change
Preconditions	Customer has claim in progress
Steps	1. Trigger status change 2. Check SMS/email
Expected Results	Alert received within 5 minutes
Actual Result	As expected
Status	Pass

Scenario ID	UAT-21
Scenario Name	View Claims Sorted by TAT Breach Risk
Preconditions	Officer has multiple claims of varying age
Steps	1. Open claims queue 2. Observe sort/color coding
Expected Results	Claims nearing TAT deadline at top, color-coded
Actual Result	As Expected
Status	Pass

Module 7: Communication & Query Management

Fields	Details
Scenario ID	UAT-22
Scenario Name	Raise Query for Missing Documents
Preconditions	Officer identifies missing document
Steps	1. Open claim 2. Select "Raise Query", specify document 3. Submit
Expected Results	Status = "Pending Customer Action"; customer notified
Actual Result	As Expected
Status	Pass

Scenario ID	UAT-23
Scenario Name	Respond to Query by Uploading Document
Preconditions	Customer has open query
Steps	1. Login, open flagged claim 2. Upload requested document 3. Submit
Expected Results	Query marked "Resolved"; processing resumes
Actual Result	As expected
Status	Pass

Scenario ID	UAT-24
Scenario Name	Chat with Support on Claim Status
Preconditions	Customer has active claim, chat access
Steps	1. Initiate chat with claim number 2. Agent responds
Expected Results	Agent views claim details, responds accurately
Actual Result	Not tested — chat vendor not finalized
Status	Not Started

Module 8: Escalation & Grievance

Fields	Details
Scenario ID	UAT-25
Scenario Name	Raise Grievance for Rejected/Delayed Claim
Preconditions	Claim rejected or delayed beyond TAT
Steps	1. Open affected claim 2. Select "Raise Grievance" 3. Submit details
Expected Results	Grievance ticket created, linked to claim

Actual Result	As Expected
Status	Pass

Scenario ID	UAT-26
Scenario Name	View Escalated/Grievance Cases in Dashboard
Preconditions	At least one grievance open
Steps	1. Manager opens grievance dashboard
Expected Results	Grievances listed with claim ID, customer, days pending
Actual Result	As expected
Status	Pass

Scenario ID	UAT-27
Scenario Name	Reassign Stuck Claim to Another Officer
Preconditions	Claim stuck due to officer unavailability
Steps	1. Manager opens claim 2. Select "Reassign", choose officer 3. Confirm
Expected Results	Claim transferred, prior history intact
Actual Result	As Expected
Status	Pass

Module 9: Reporting & MIS

Fields	Details
Scenario ID	UAT-28
Scenario Name	View Daily/Weekly Claim Volume and TAT Reports
Preconditions	Claims data exists for period
Steps	1. Manager selects date range 2. Generate report
Expected Results	Report shows volume, average TAT, breach count within 10 sec
Actual Result	As Expected
Status	Pass

Scenario ID	UAT-29
Scenario Name	Breakdown of Claims by Rejection Reason
Preconditions	Rejected claims exist
Steps	1. Manager selects "Rejection Analysis"
Expected Results	Claims grouped by reason with count/percentage
Actual Result	As expected
Status	Pass

Scenario ID	UAT-30
Scenario Name	Generate Audit Report of Claim Actions
Preconditions	Claims with logged actions in date range
Steps	1. Compliance selects date range 2. Generate report
Expected Results	Report lists every action with user ID, timestamp, type
Actual Result	As Expected
Status	Pass

Module 10: Admin & Configuration

Fields	Details
Scenario ID	UAT-31
Scenario Name	Configure TAT Thresholds and Escalation Rules
Preconditions	Admin has config access
Steps	1. Navigate to TAT settings 2. Update threshold 3. Save
Expected Results	New threshold applies going forward, no redeployment needed
Actual Result	As Expected
Status	Pass

Scenario ID	UAT-32
Scenario Name	Create and Manage User Roles and Permissions
Preconditions	Admin has role management access
Steps	1. Create new role with permissions 2. Assign to test user 3. Modify existing role
Expected Results	New role restricts access as configured; changes apply immediately
Actual Result	As expected
Status	Pass

Scenario ID	UAT-33
Scenario Name	View System Health and Integration Status
Preconditions	Admin has dashboard access
Steps	1. Open system health dashboard 2. Review PAS/NEFT status
Expected Results	Status shown as Connected/Failed with last sync time

Actual Result	Displayed correctly; failure alerting still being defined
Status	In Progress

Module 11: Fraud & Risk Flagging

Fields	Details
Scenario ID	UAT-34
Scenario Name	Flag Claims Matching Fraud Patterns
Preconditions	Claim matches defined fraud rule
Steps	1. Raise claim matching fraud pattern 2. Observe flagging behavior
Expected Results	Claim auto-flagged "Suspicious", highlighted in queue
Actual Result	Rule engine logic still under review
Status	In Progress

Scenario ID	UAT-35
Scenario Name	View Risk Score on Flagged Claims
Preconditions	Claim flagged as suspicious
Steps	1. Underwriter opens flagged claim 2. Review risk score
Expected Results	Risk score (Low/Medium/High) with contributing factors shown
Actual Result	Not tested — dependent on fraud rule engine
Status	Blocked

Scenario ID	UAT-36
Scenario Name	Maintain Separate Log of Fraud-Flagged Claims
Preconditions	At least one claim flagged
Steps	1. Compliance opens fraud log 2. Review resolution status
Expected Results	All flagged claims listed with resolution status
Actual Result	Not tested — dependent on UAT-34, UAT-35 defined
Status	Blocked

Module 12: Fraud Investigation

Fields	Details
Scenario ID	UAT-37
Scenario Name	Review Fraud-Flagged Claim and Evidence
Preconditions	Claim flagged as suspicious, evidence attached
Steps	1. Fraud investigator opens flagged claim 2. Review evidence and flag reason

	3. Determine if further investigation needed
Expected Results	Investigator can view all flag details and evidence; decision option (proceed/escalate) available
Actual Result	Not tested — dependent on fraud rule engine (UAT-34)
Status	Blocked

Fields	Details
Scenario ID	UAT-38
Scenario Name	Record Investigation Outcome
Preconditions	Investigation review completed
Steps	1. Investigator enters outcome and recommendation 2. Submit 3. Observe claim status
Expected Results	Outcome logged against claim; claim unblocked to proceed with documented decision
Actual Result	Not tested — dependent on UAT-37
Status	Blocked

Module 13: Claim Rejection

Fields	Details
Scenario ID	UAT-39
Scenario Name	Record Claim Rejection Reason
Preconditions	Claims officer determines claim is not payable
Steps	1. Officer selects "Reject Claim" 2. Enter rejection reason 3. Submit
Expected Results	Claim status = "Rejected"; reason logged and visible in audit trail
Actual Result	Not tested — module not yet built
Status	Blocked

Fields	Details
Scenario ID	UAT-40
Scenario Name	Customer Receives Rejection Reason and Next Steps
Preconditions	Claim status just changed to "Rejected"
Steps	1. Trigger rejection notification 2. Customer checks email/SMS/portal
Expected Results	Customer receives rejection reason and grievance-filing option
Actual Result	Not tested — module not yet built
Status	Not Started

16. Challenge & Solutions

Challenge 1: Real-time dependency on the Policy Administration System (PAS)

Field	Details
Challenge	DICMS needed live policy data (sum insured, coverage terms, validity) from PAS at the point of claim validation, but PAS was a legacy system not originally built for real-time external queries.
Impact	Claims officers risked validating claims against outdated or incomplete policy data, leading to incorrect approvals, rejected valid claims, or settlement disputes with customers.
Solution	Introduced a middleware integration layer with a fallback mechanism — if PAS was unreachable, the system allowed manual entry with a mandatory "PAS Reconciliation" flag, forcing a follow-up verification before final settlement.
Outcome	Claim validation continued without hard downtime dependency on PAS, while maintaining a controlled audit trail for any manually entered policy data, reducing settlement disputes.

Challenge 2: Balancing fast claim TAT with fraud detection needs

Field	Details
Challenge	Business stakeholders wanted faster claim turnaround time (TAT) to improve customer satisfaction, but the risk team insisted on thorough fraud checks before approval — two goals pulling in opposite directions.
Impact	Without a resolution, either fraud checks would be skipped under TAT pressure (increasing fraud exposure), or every claim would face manual scrutiny (defeating the purpose of digitization).
Solution	Designed a risk-based triage model — claims were auto-scored on submission using predefined fraud indicators (repeated claimant, inflated amount, location mismatch). Only "Medium" and "High" risk claims were routed for mandatory manual review; "Low" risk claims proceeded through the standard fast-track flow.
Outcome	Average TAT for low-risk claims improved significantly, while high-risk claims still received full scrutiny — satisfying both the customer experience and risk management objectives.

Challenge 3: Surveyor connectivity in remote/low-network areas

Field	Details
-------	---------

Challenge	Surveyors conducting site visits for claims (accident sites, rural properties) often worked in areas with poor or no internet connectivity, making real-time report submission unreliable.
Impact	Delayed survey report uploads directly stalled the claims pipeline, since underwriting couldn't proceed without the survey findings — creating a bottleneck at one of the most time-sensitive stages of the process.
Solution	Built offline-first capability into the surveyor mobile app — surveyors could fill in reports and capture photos offline, with the app auto-syncing to DICMS once connectivity was restored.
Outcome	Survey submissions were no longer blocked by network availability, keeping the claims pipeline moving even from remote locations.

Challenge 4: Conflicting claim amount recommendations (Surveyor vs Underwriter)

Field	Details
Challenge	Underwriters frequently revised the claim amount recommended by surveyors, but there was no structured way to capture why — leading to inconsistent decisions and difficulty defending settlements during audits or customer disputes.
Impact	Lack of a documented rationale created compliance risk (IRDAI audits) and weakened Meridian's position in case a customer challenged a reduced settlement.
Solution	Made "reason for revision" a mandatory field whenever an underwriter changed the surveyor's recommended amount, with both the original and revised values stored side-by-side in the claim's audit trail.
Outcome	Every amount revision became traceable and defensible, strengthening compliance posture and giving Meridian a clear paper trail for grievance or regulatory review.

Challenge 5: Customer document uploads failing due to format/size issues

Field	Details
Challenge	Customers frequently attempted to upload documents (photos, scanned bills) in inconsistent formats and sizes, especially from mobile devices, leading to failed submissions and support calls.
Impact	High document-upload failure rate meant delayed claim intimation and an increase in avoidable calls to customer support, adding operational cost.
Solution	Added client-side validation with clear, plain-language error messages (e.g., "File too large — please upload under 10 MB") and auto-compression for images exceeding size limits before upload.

Outcome	Upload failure rate dropped, and the number of support calls related to document submission issues reduced noticeably.
----------------	--

Challenge 6: NEFT payment failures disrupting settlement closure

Field	Details
Challenge	A portion of NEFT payment attempts failed due to incorrect or outdated bank account details on file, but the system had no clear recovery path — failed payments simply stalled without visibility.
Impact	Customers experienced payment delays without knowing why, and finance teams had no structured queue to identify and correct failed transactions, leading to escalations.
Solution	Introduced a dedicated "Payment Failed" status with auto-routing to the finance team's exception queue, along with a customer notification prompting them to verify/update bank details directly through the portal.
Outcome	Failed payments became visible and actionable immediately instead of going unnoticed, cutting down settlement closure delays and reducing escalations to customer support.

Challenge 7: Role-based access complexity across multiple stakeholder types

Field	Details
Challenge	DICMS had to serve ten distinct stakeholder types (customer, call centre executive, claims officer, surveyor, underwriter, finance team, claims manager, compliance officer, fraud investigation team, admin), each needing different levels of access to the same claim record.
Impact	Poorly defined access boundaries risked either over-exposing sensitive data (e.g., customer bank details visible to surveyors) or under-provisioning access (e.g., fraud investigators lacking visibility into a claimant's prior claim history needed to assess repeat-claim risk), both of which would create security and usability issues.
Solution	Conducted a dedicated access-mapping workshop with stakeholders to define a role-permission matrix down to the field level (not just module level), then implemented role-based access control (RBAC) accordingly, configurable by admins without code changes.
Outcome	Each stakeholder saw exactly what their role required — no more, no less — improving both data security and day-to-day usability, while giving admins flexibility to adjust roles as the organization evolved.

17. BA tools & Techniques

1. Elicitation Techniques

Technique	How It Was Applied on
Stakeholder Interviews	Conducted (simulated) discussions with Claims Officers, Underwriters, and Finance Team representatives to understand pain points in the manual claim handling process — delays in survey assignment, manual deduction calculations, lack of real-time status visibility for customers.
Workshops (JAD-style)	Used to bring Claims Manager, Surveyor, and Underwriter perspectives together when defining the claim approval and escalation flow, especially the high-value claim routing logic.
Document Analysis	Reviewed existing (assumed) claim intimation forms, policy documents, and PAS data fields to identify what information was already being captured manually versus what needed to be digitized.
Observation / Process Walkthrough	Mapped the current-state manual claim journey (call centre intimation → paper survey report → manual settlement) to identify where digitization would remove the most friction.

2. Requirement Analysis & Documentation Techniques

Technique	How It Was Applied on
MoSCoW Prioritization	Applied to categorize requirements — e.g., PAS integration and NEFT payment were Must Have; multi-language portal support and chat support were Should/Could Have.
User Stories with Acceptance Criteria	Used to break down each stakeholder need (Customer, Surveyor, Underwriter, etc.) into testable, INVEST-aligned stories, kept deliberately separate from Acceptance Criteria for clean versioning.
Business Rules Documentation	Captured claim-lifecycle logic (eligibility, deductible, fraud flagging, escalation) as standalone, testable business rules — separated from user stories and NFRs, since rules govern <i>how the business operates</i> , not just system behavior.
Requirement Traceability Matrix (RTM)	Used to trace every Business Requirement → User Story → Acceptance Criteria → Test Case → UAT, ensuring nothing was built without a traceable business justification and nothing was tested without a traced requirement.
Non-Functional Requirements (NFR) Specification	Documented separately from functional requirements to capture performance, security, availability, and compliance expectations (e.g., IRDAI alignment, encryption standards).

3. Process Modeling Techniques

Technique	How It Was Applied on
As-Is / To-Be Process Mapping	Compared the manual claim journey against the proposed digital claim lifecycle (Intimation → Validation → Survey → Underwriting → Settlement → Closure) to visualize where automation reduced handoffs.
Swimlane Diagrams	Used to represent responsibility handoffs across roles — e.g., where a claim moves from Claims Officer to Surveyor to Underwriter to Finance Team — clarifying ownership at each stage.
Claim Lifecycle / State Diagram	Modeled the defined claim status transitions (Submitted → Under Validation → Survey Assigned → Approved/Rejected → Paid → Closed) to prevent invalid status jumps, directly feeding into BR-033.

4. Data & Decision Modeling Techniques

Technique	How It Was Applied on
Decision Tables	Used to define fraud-flagging logic and high-value claim routing — mapping combinations of conditions (claim amount, claimant history, document consistency) to system actions.
Business Rules Catalog	A structured, ID-based repository of business logic (BR-001 to BR-041) separated by module, so rules can be referenced independently by developers, testers, and auditors.

5. Requirement Validation & Quality Techniques

Technique	How It Was Applied on
Peer Review / Walkthrough	Business Rules and User Stories were structured for review against each stakeholder's actual responsibilities, to catch role-permission conflicts early (e.g., ensuring segregation of duties between Claims Officer and Underwriter approval).
INVEST Criteria Check	Applied to each User Story to confirm it was Independent, Negotiable, Valuable, Estimable, Small, and Testable before moving to Acceptance Criteria.
SMART Criteria for Acceptance Criteria	Each AC was written to be Specific, Measurable, Achievable, Relevant, and Time-bound (e.g., "within 2 minutes," "within 10 seconds") wherever a measurable expectation applied.

6. Traceability & Test Management Techniques

Technique	How It Was Applied on
Requirement Traceability Matrix (RTM)	End-to-end mapping from Business Requirement to UAT, used to track project status realistically (Completed / In Progress / Not Started / Blocked) rather than presenting a falsely "all-complete" project.
UAT Scenario Design	Structured scenarios (Preconditions → Steps → Expected Result → Actual Result → Status) written from a business-user perspective rather than a technical test-script perspective, keeping focus on business outcomes.
Gap Analysis	Used implicitly across the RTM/UAT to identify dependencies and blockers — e.g., Fraud Investigation Team's flagging logic being dependent on Compliance's finalized fraud rule definitions, which surfaced multiple "In Progress"/"Blocked" statuses rather than hiding them.

7. Communication & Stakeholder Management Techniques

Technique	How It Was Applied on
Stakeholder Mapping	Identified 10 distinct stakeholder roles (Customer, Claims Officer, Claims Manager, Surveyor, Underwriter, Finance Team, Fraud Investigation Team, Compliance Officer, Call Centre Executive, System Admin) and ensured every requirement artifact addressed relevant roles explicitly rather than generically.
RACI-style Role Clarity	Embedded into Business Rules (e.g., BR-020 Segregation of Duties, BR-040 Role-Based Access) to make role accountability explicit rather than assumed.
